| 01 | Problem Statement | 05 | Technologies Used |
| 02 | Proposed Solution | 06 | Agile Methodology |
| 03 | Existing Apps in the Market | 07 | Business & Sustainability |
| 04 | Workflow Features | 08 | Research & References |

Simple teams, overloaded tools

Feature overload

Jira and Asana pack in sprints, epics, and story points most small teams never use.

Manual assignment

Nobody tracks who's overloaded - tasks get handed out by guesswork.

Slow onboarding

New teammates need training just to use the tool meant to save them time.

Design question: how can one lightweight app keep a small team's workload visibly balanced, without the bloat?

One board. Two roles. Balanced by design.

React Native + Expo Router → Android, iOS, and Web from the same code.

Manager

Creates tasks, assigns them (or accepts an AI suggestion), sees the full board and workload view.

Team Member

Sees their own tasks, moves them across the board, comments - nothing extra to learn.

Initial boundary: single-team board using synthetic/test data. Multi-team workspaces are future work.

Where Software Teams stands apart

Features	Trello	Asana	Jira	Software Teams
Kanban task board	✓	✓	✓	✓
Simple setup, no configuration	✓	✗	✗	✓
AI suggests who should take a task	✗	✓	✗	✓
AI turns rough notes into clear tasks	✓	✓	✓	✓
AI weekly progress summary	✗	✓	✓	✓
Workload chart built into the board	✗	✓	✗	✓
AI shows why it made its suggestion	✗	✗	✗	✓

Trello

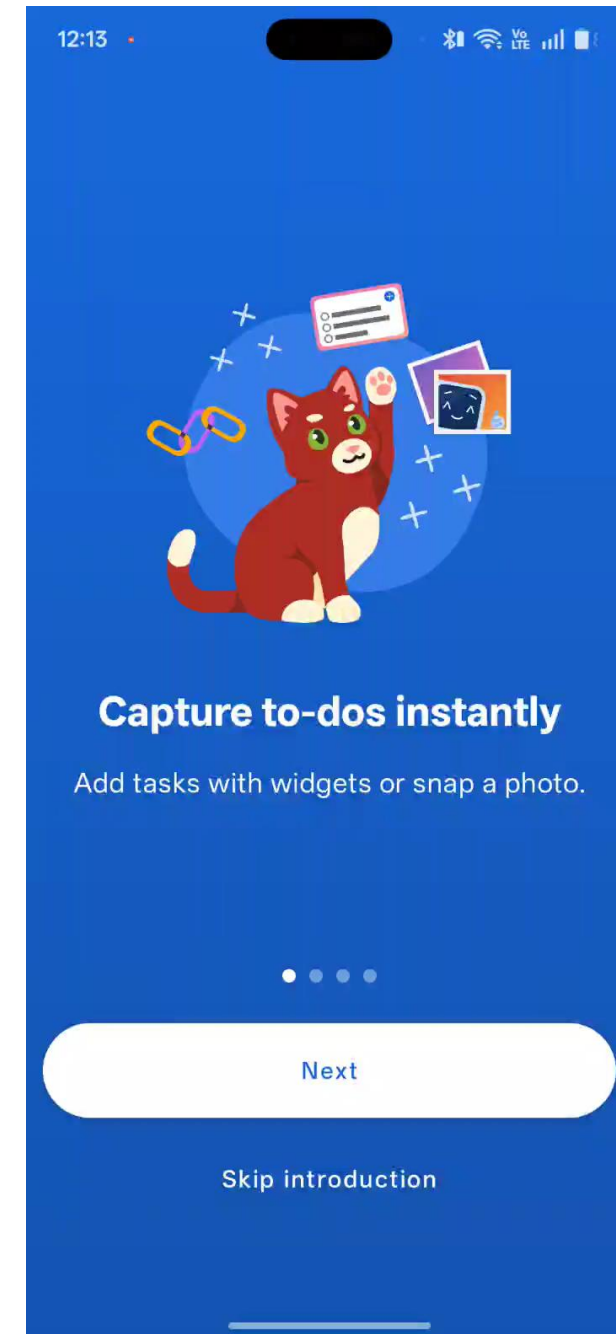

{10M+ downloads on Google Play, 3.8–4.2★}

Pros

- Very easy to learn
- Free plan works well
- Cheapest paid plan of the three

Cons

- No workload management
- AI is light, paid plans only
- Too basic for bigger projects

Constant UNHELPFUL updates that frequently impact productivity. Doesn't integrate well with Microsoft Office at all. There are always serious, ongoing issues but right now, I cannot save content to cards because they rolled out a new feature that requires you to select a green check to save & move on to the next card- but the app doesn't recognize your mouse selection so nothing actually gets saved. You typed a paragraph for NOTHING 🤔🤔. A useless company OMG.

LOVE Trello! Wish list: automated backups and a few other minor features. But the app ROCKS overall! 2023 Downgrading my review from 5 stars to 3 due to the inflexible and clunky nature of adding free-form notes. Activity boxes: Static and you cannot rearrange them. Comment boxes: Similarly rigid. Descript box: Very limited. MAJOR drawback. Apparently, there is a "powerup" I can purchase... though I already pay for one of the highest Trellos or link a doc, but then; what's the point??

In the widget, please add dates for items dated in the future and also fix it so the sort control (swirl icon) works reliably. update: subtracted another star as this is STILL broken and thousands have reported this issue. the original dev team used to fix bugs but the Atlassian's apparently don't care.

Asana

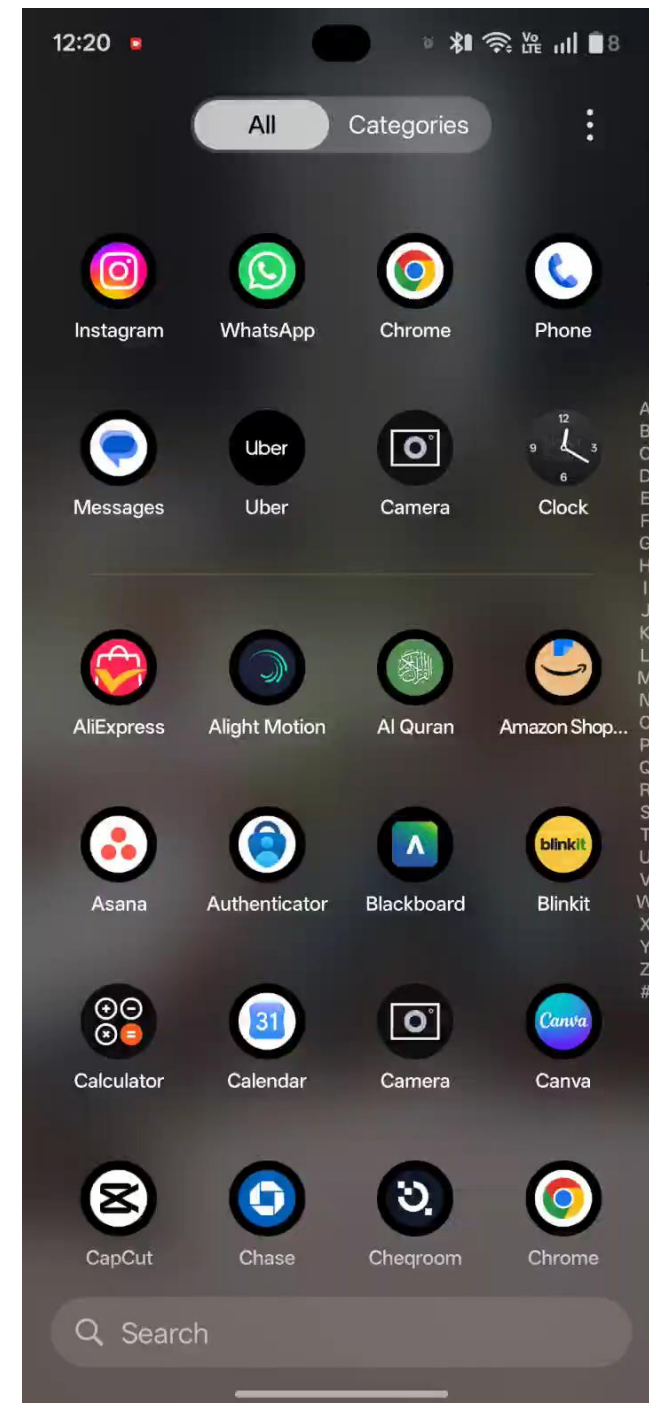

{5M+ downloads on Google Play, 3.8–3.9★}

Pros

- Many views: list, board, timeline
- Built-in workload view
- AI Studio can suggest task owners

Cons

- More to learn and set up
- Best AI needs paid plans and credits
- Free plan limited to 2 users

Update down to 3 stars in September 2026. After this month's update (now called "Asana: Work Management") I can't find how to create a recurring task anymore, or how to make a task recurring. Looks like it and other helpful features were removed in 2025 from the free version. Oh well! Original review (2019) follows (5 Stars) User interface is very intuitive once you figure out how you want to use it. Not a fan of the name and reason for the name, but that aside, a very useful app!

Would be better if it had a dark mode like the desktop version. The card sharing ability is super important to me and works really easily. However, the darkmode and the lack of image hosting on the cards is a little bit of a downer.

Jira

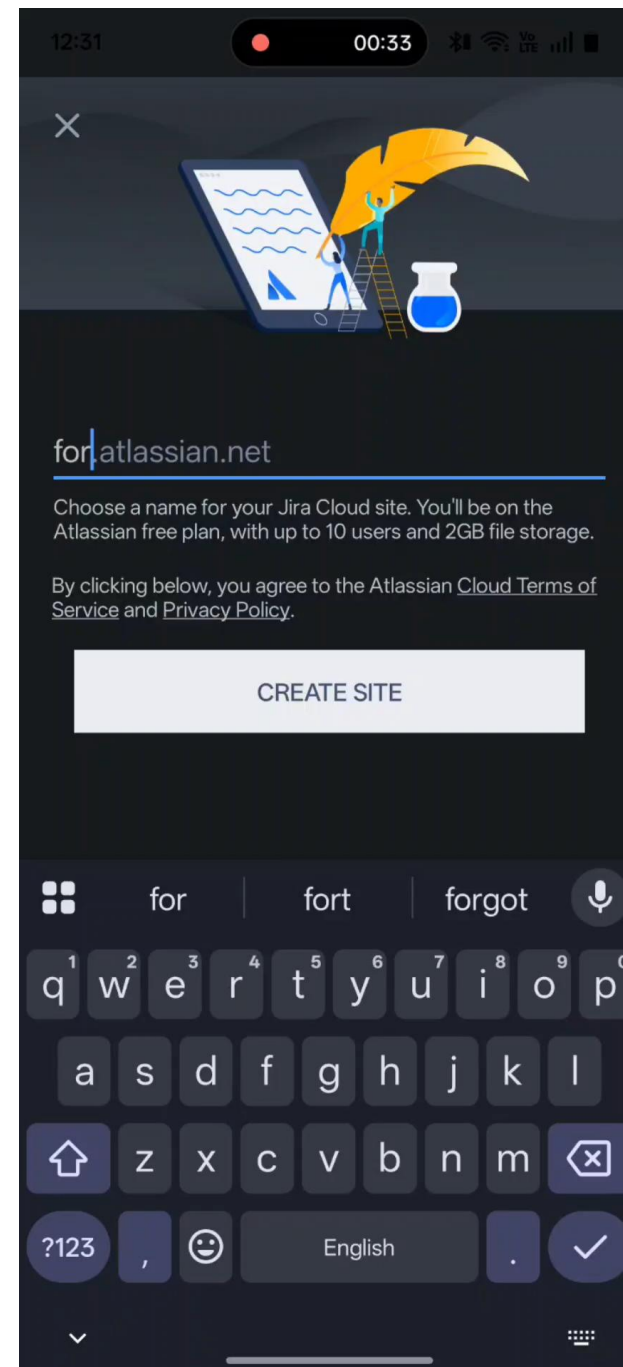

{1M+ downloads on Google Play, 4.4★}

Pros

- Best sprint and backlog tools
- Highest rating of the three
- Thousands of add-on apps

Cons

- Complex, needs training
- Mobile app called limited by users
- Workload tracking needs add-ons

★☆☆☆☆ July 22, 2026

for a paid platform the app is laughably bad. **no way to sort tickets by different fields in alot of queues.** only used because I have to.

David McCandless

★☆☆☆☆ September 17, 2026

New simplified **create page is broken as it doesn't show mandatory fields set by the organisation.** Only description and attachments are available and when I try to complete it I get a validation error for a field I can't see. It also prevents putting newlines in the description on the default google keyboard. At least on the web I can see and customise the fields even if the **new UX for the form is a mess..**

★★★★★ August 8, 2026

Very good app for personal projects! You can arrange tasks and share them with your partner. One thing is a bit annoying: **when you set task to different state like Done it doesn't update until you refresh the page.** And you cannot refresh at every situation and then you need to leave the page so that it updates. Not very convenient.

Josh Tolentino (AyyeltsJoshh)

★☆☆☆☆ September 23, 2026

UX is absolutely dog. I feel like Im playing a mobile game here with all these "suggestions" popping up on the screen. **let me use the app rather than sell me feautures** I dont care about

Martin Jelínek

★☆☆☆☆ September 22, 2026

FIX THE FILE SHARING FINALLY PLEASE!! **It is not possible to share a file to Jira app.** The newly created task does not include the file! Finally make an automated test for this. Very basic function that keeps getting messed up in production with new releases.

What makes Software Teams useful

1

Kanban Board + Workload

Move tasks across To Do -> In Progress -> Done, with a live chart of who has how much.

2

AI Smart Auto-Assign

Suggests the best owner for a new task and shows why: "Sarah has 2 open tasks, Jake has 6."

3

AI Task Writer

Type a rough one-liner. AI turns it into a clear title, description, and checklist.

4

AI Weekly Summary

One click writes a plain-English recap of what got done and what is stuck.

No account has more access than its role needs - Synthetic/test data only - AI only suggests, people decide.

Technologies used

TypeScript

BUILT ON TOOLS CHOSEN FOR A REASON

React Native + Expo

One codebase ships to iOS, Android, and Web.

TypeScript + Expo Router

Typed, file-based navigation reduces runtime bugs.

Firebase Auth

Ready-made secure login. No custom auth to build.

Cloud Firestore + Rules

Live task updates, with role access enforced in the database.

Cloud Functions

Runs auto-assign and AI calls safely on the server.

AI Model API

Powers the task writer and weekly summary.

GitHub Actions

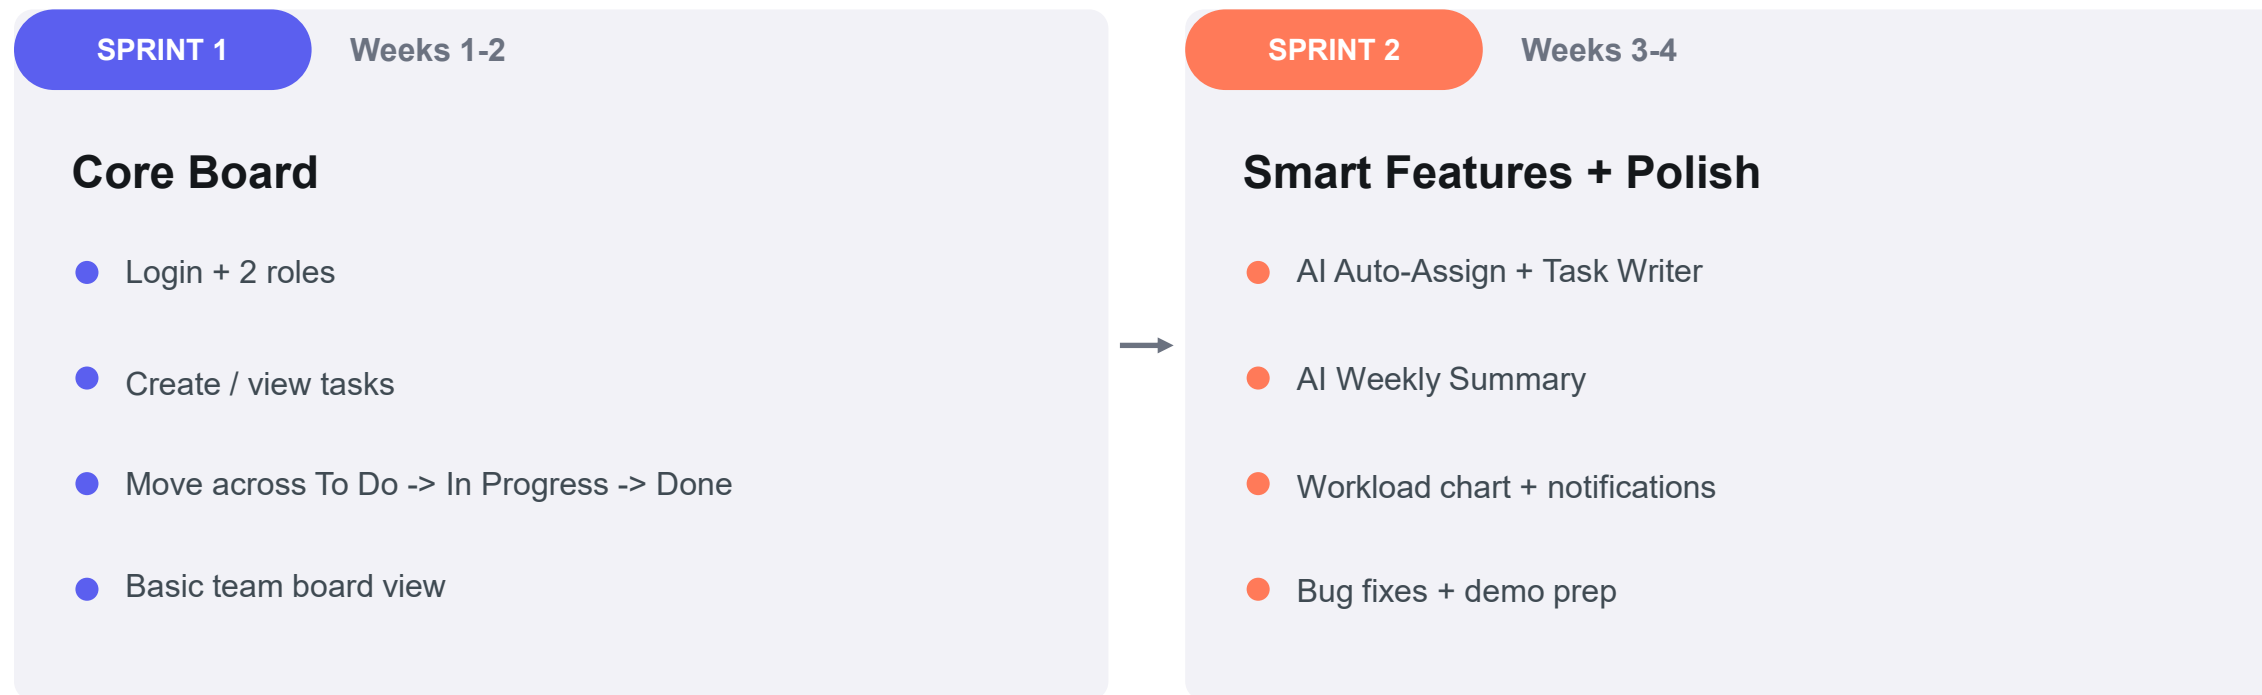

Automated tests run before every release.

Agile Methodology

Two sprints, four weeks, done

Each sprint ends with a working, demoable build - GitHub issues + project board are the evidence trail.

What the research actually supports

Google Play Store listings - Trello, Asana, Jira Cloud

Source of the download, rating, and platform data used in the market comparison.

G2, Rock & Monday.com Trello/Asana/Jira comparisons (2026)

Confirms the simple vs. feature-heavy split and shows which AI each tool includes.

Expo - "Universal Android, iOS, and Web apps"

Confirms one React Native/Expo codebase can ship to all three targets - supports the proposed solution.

FreshCode & CIS - Trello-clone MVP cost guides (2026)

Basis for the cost-to-build estimate in the business model.

Trello, Asana, Jira public pricing pages (2026)

Basis for the per-seat pricing comparison used in the revenue model.

Thank you.
